DEFINITIONS

Median household income: Median combined total income after tax of all household members aged 15+ years

Low income: Low income is 50% of the median income in Canada adjusted for family size and composition, as a % of households and % of children (17 years and younger)

Housing affordability: Housing is un-affordable when spending 30+ % of total household income on shelter expenses (e.g., electricity, water, municipal services, rent, mortgage, etc.)

Education: % ages 15+ years with no certificate, diploma, or degree

Socioeconomic Factor Index: Reflects socioeconomic status and social determinants of health as a composite score of average household income, % of single parent households, unemployment rate ages 15+ years, and % ages 15+ years with no high school graduation

Unemployment: % ages 15+ years unemployed as a % of the labour force population

Life expectancy: Expected length of life in years based on patterns of mortality

Mood and anxiety disorders: % adults diagnosed with mood or anxiety disorders

Teen pregnancies: Rate of pregnancies (live births, stillbirths, abortions, and ectopic pregnancies) per 1,000 female residents ages 15-19

Inadequate prenatal care: % women with single, live, in-hospital births receiving no or inadequate prenatal care (e.g., regular prenatal visits)

Preterm births: % live births with gestational age less than 37 weeks

Pediatric dental extractions: Rate of hospital-based dental surgeries involving extractions for children under 6 years, per 1,000

Diabetes prevalence: Total % of residents with diagnosed (Type 1 and 2) diabetes (incidence is number of new diagnoses per 100 person-years)

Unintentional injury hospitalization: Rate per 1,000 residents of those who stayed in hospital at least one day with a primary diagnosis of unintentional injury (e.g., falls, motor vehicle accident).

Total respiratory morbidity: % diagnosed with respiratory disease (asthma, chronic or acute bronchitis, emphysema, or chronic airway obstruction)

Child asthma: % ages 5-19 diagnosed with asthma

Majority of care: % who received at least 50% of their ambulatory visits from the same physician or nurse practitioner - continuity is associated with improved satisfaction and better health outcomes

Benzodiazepine overprescribing (community): % ages 75+ years living in community (excludes personal care homes) who had at least 2 prescriptions for benzodiazepines or at least 1 dispensed with more than a 30-day supply - Benzodiazepines are used to treat seizures, anxiety, and insomnia but are not recommended for older adults because of safety concerns (e.g., confusion, memory loss, coordination)
